

Grammatical Cases

| | |
|------------|-------------------------------|
| Nominative | subject; predicate nominative |
| Genitive | possessive |
| Dative | indirect object |
| Accusative | direct object |
| Ablative | object of a preposition |

Comparisons to English usage

- The [nominative case](#) marks the [subject](#) of a statement and is used with a [copula](#) (linking verb): "*Mary* is going to the store" or "*Mary* is my sister". It also names the predicate nominative: "Mary is my *sister*".
- The [genitive case](#) (also known as the [possessive case](#)) expresses possession, measurement, or source. In English, the genitive case is represented analytically by the preposition [of](#) or by the [enclitic](#) "-s", which itself developed from the genitive case. This "-s" closely resembles the Latin third declension's genitive suffix "-is". In Latin, as in English, the genitive singular may be identical to the nominative plural of a noun (apart from the apostrophe in English, which does not change pronunciation): e.g., "equi" = "horse's/ horses", "insulae" = "island's/ islands", etc.
- The [dative case](#) marks the recipient of an action, the [indirect object](#) of a verb. In English, the prepositions [to](#) and [for](#) tend to denote this case analytically. However, note that in English, the dative may be marked by word order without a preposition; contrast "Give me the book" with "Give the book to me" ("Give to me the book" would be incorrect or at least very unusual).
- The [accusative case](#) marks the [direct object](#) of a verb. In English, except for a small number of words which display a distinct accusative case (e.g., who/whom, I/me, he/him), the accusative and nominative cases are identical in form; they are usually distinguished only by word order.
- The [ablative case](#) expresses separation, indirection, or the means by which an action is performed. In English, the prepositions [by](#), [with](#), [from](#), [in](#) and [on](#) are most commonly used to indicate this case.
- The [vocative case](#) is used to address someone or something in direct speech. In English, this function is expressed by intonation or punctuation: "*Mary*, are you going to the store?" or "*Mary*!" ("*Mary*" is vocative). Historically, English-language noun paradigms translated this case with a prefaced interjection such as "O *Mary*!"
